0.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

BasicGame	5
BasicInterface	6
Coordinates	8
CountdownTimer	8
Event	9
EventQueue	10
Game	10
Hint	13
LinkedList< T >	14
LinkedListNode< T >	15
MistakeCounter	16
Move	16
Sudoku	17
SudokuGenerator	18
Test	19
Timer	19
UserInterface	20

Rozdział 1

Opis programu

1.1 Ogólny opis

Celem programu jest umożliwienie rozgrywki sudoku w różnych trybach i z dowolnym interace użytkownika. W programie polmorfizm zostanie zastosowany jako warstwa abstrakcji pomiędzy klasami pochodnymi klasy Game i klasami pochodnymi UserInterface, co pozwoli wybierać tryb gry i jej interface niezależnie od siebie.

Algorytm generujący sudoku zawiera się klasie SudokuGenerator i jest oparty na algorytmie DLX, operującym na cyklicznej liście dwukierunkowej (LinkedList), obecna implementacja pozwala na generację wypełnionego sudoku 25x25 w zadawalającym czasie $< 1s$

Metoda generate() klasy SudokuGenerator zwraca w pełni wypełnione sudoku, w celu usunięcia części pól, należy wywołać funkcję deleteFromBoard() Funkcja ta będzie stopniowo usuwała komórki z sudoku i sprawdzała czy możliwe jest rozwiązanie bez zgadywania, do momentu aż sudoku osiągnie zadany poziom trudności

Interface użytkownika i tryb gry zostaną odczytane z argumentów wejściowych programu, w zależności od wybranej kombinacji zostaną zainstancjonowane odpowiednie klasy pochodne

Komunikacja między interface użytkownika a grą będzie odbywała się za pomocą 2 kolejek fifo zawierających odpowiednio pochodne klasy Event lub obiekty std::string zawierające wiadomości zwrotne.

1.2 Przykłady

Program mógłby zostać uruchomiony z lini poleceń w następujący sposób:

```
Sudoku limitedTime cli 3
```

Oznaczało by to że sudoku zostanie uruchomione w konsoli, w trybie z ograniczonym czasem, a wygenerowane sudoku będzie rozmiaru 9x9 (3^2 , długość boku poprawnego sudoku jest kwadratem)

Rozdział 2

Class Documentation

2.1 BasicGame Class Reference

Inheritance diagram for BasicGame:

Public Member Functions

- **BasicGame** ([UserInterface](#) &interface, [LinkedList](#)< std::unique_ptr< [Event](#) >> &queue)
- void **init** ()
- void **applyMove** ([Move](#) &move)
- void **retractMove** ()
- void **askForHint** ([Coordinates](#) coords)
- void **changeState** ([Game::GameState](#) &newState)
- void **gameLoop** ()
- void **updateLeaderboard** ([Leaderboard](#) &leaderboard)

Additional Inherited Members

2.1.1 Member Function Documentation

2.1.1.1 applyMove()

```
void BasicGame::applyMove (
    Move & move ) [virtual]
```

Applies move to sudoku

Implements [Game](#).

2.1.1.2 askForHint()

```
void BasicGame::askForHint (
    Coordinates coords ) [virtual]
```

Reveals one hidden cell

Implements [Game](#).

2.1.1.3 retractMove()

```
void BasicGame::retractMove ( ) [virtual]
```

Undoes a last move

Implements [Game](#).

The documentation for this class was generated from the following files:

- GameModes/BasicGame.h
- GameModes/BasicGame.cpp

2.2 BasicInterface Class Reference

Inheritance diagram for BasicInterface:

Public Member Functions

- **BasicInterface** ([LinkedList](#)< std::unique_ptr< [Event](#) >> &eventQueue, [LinkedList](#)< std::string > &messageQueue)
- void [initiate](#) ()
- void **render** ([Sudoku](#) &sudoku)
- void **render** ([Timer](#) &timer)
- void **render** ([Hint](#) &hint)
- void **render** ([MistakeCounter](#) &mistakeCounter)
- void **render** ([CountdownTimer](#) &countdownTimer)
- void **message** (const std::string &msg)
- void [display](#) ()
- void [input](#) ()

Additional Inherited Members

2.2.1 Member Function Documentation

2.2.1.1 [display\(\)](#)

```
void BasicInterface::display ( ) [virtual]
```

Displays, or in case of CLI flushes, rendered elements. Meaningful mainly in GUI applications

Implements [UserInterface](#).

2.2.1.2 [initiate\(\)](#)

```
void BasicInterface::initiate ( ) [virtual]
```

invoked before rendering of UI

Implements [UserInterface](#).

2.2.1.3 input()

```
void BasicInterface::input ( ) [virtual]
```

Gathers input from user and passes it to `_eventQueue` of appropriate type

Implements [UserInterface](#).

The documentation for this class was generated from the following files:

- `UserInterfaces/BasicInterface.h`
- `UserInterfaces/BasicInterface.cpp`

2.3 Coordinates Class Reference

```
#include <Sudoku.h>
```

Public Member Functions

- **Coordinates** (uint8_t row=0, uint8_t column=0)

Public Attributes

- uint8_t **_row**
- uint8_t **_column**

2.3.1 Detailed Description

Class representing [Sudoku](#) coordinates

The documentation for this class was generated from the following file:

- `Sudoku/Sudoku.h`

2.4 CountdownTimer Class Reference

```
#include <Misc.h>
```

Public Member Functions

- **CountdownTimer** (unsigned int timeLimit)
- void **start** ()
- unsigned int **limitAsSeconds** ()
- unsigned int **asSeconds** ()

2.4.1 Detailed Description

Minor class representing countdown timer

The documentation for this class was generated from the following files:

- GameModes/Misc.h
- GameModes/Misc.cpp

2.5 Event Class Reference

```
#include <Event.h>
```

Public Member Functions

- virtual void **run** ([Game](#) &game)=0

2.5.1 Detailed Description

Base class , instances are meant to have varying constructors and act as lambda captures

2.5.2 Member Function Documentation

2.5.2.1 run()

```
virtual void Event::run (  
    Game & game ) [pure virtual]
```

Only virtual method, executes class specific action on `Game` object

The documentation for this class was generated from the following file:

- Event/Event.h

2.6 EventQueue Class Reference

Public Member Functions

- void **push_back** (std::unique_ptr< `Event` > &&event)
- void **pop** (`Game` &game)
- void **run** (`Game` &game)
- void **clear** ()
- unsigned int **size** ()

The documentation for this class was generated from the following files:

- Event/EventQueue.h
- Event/EventQueue.cpp

2.7 Game Class Reference

```
#include <Game.h>
```

Inheritance diagram for Game:

Public Types

- enum `GameState` {
 Loading , Play , Pause , TimeOut ,
 FinalMistake , GameOver }

Public Member Functions

- template<typename T >
 Game (`UIInterface` &interface, `LinkedList`< T > &eventQueue)
- virtual void `applyMove` (`Move` &move)=0
- virtual void `retractMove` ()=0
- virtual void `askForHint` (`Coordinates` coords)=0
- virtual void `init` ()=0
- virtual void `gameLoop` ()=0

Protected Attributes

- std::shared_ptr< `UIInterface` > `_interface`
- `GameState` `_state`
- `Sudoku` `_baseSudoku`
- `Sudoku` `_sudoku`
- `Sudoku` `_filledSudoku`
- `LinkedList`< `Move` > `_moves`

2.7.1 Detailed Description

Abstract class representing game mode It's responsible for modifying sudoku board and controlling game state

2.7.2 Member Enumeration Documentation

2.7.2.1 GameState

```
enum Game::GameState
```

Enum representing state of game

2.7.3 Member Function Documentation

2.7.3.1 applyMove()

```
virtual void Game::applyMove (
    Move & move ) [pure virtual]
```

Applies move to sudoku

Implemented in [BasicGame](#).

2.7.3.2 askForHint()

```
virtual void Game::askForHint (
    Coordinates coords ) [pure virtual]
```

Reveals one hidden cell

Implemented in [BasicGame](#).

2.7.3.3 retractMove()

```
virtual void Game::retractMove ( ) [pure virtual]
```

Undoes a last move

Implemented in [BasicGame](#).

2.7.4 Member Data Documentation

2.7.4.1 `_baseSudoku`

`Sudoku` `Game::_baseSudoku` [protected]

Generated sudoku, with gaps

2.7.4.2 `_filledSudoku`

`Sudoku` `Game::_filledSudoku` [protected]

Generated filled sudoku

2.7.4.3 `_interface`

`std::shared_ptr<UserInterface>` `Game::_interface` [protected]

Pointer to interface used by game mode

2.7.4.4 `_moves`

`LinkedList<Move>` `Game::_moves` [protected]

List of moves

2.7.4.5 `_sudoku`

`Sudoku` `Game::_sudoku` [protected]

`Sudoku` in progress

The documentation for this class was generated from the following file:

- `GameModes/Game.h`

2.8 Hint Class Reference

```
#include <Misc.h>
```

Public Member Functions

- **Hint** (unsigned int hintCount)
- bool **uncover** ([Coordinates](#) pos, [Sudoku](#) &filledSudoku, [Sudoku](#) &sudoku)
- unsigned int **getHintCount** ()
- unsigned int **getMaxHintCount** ()

2.8.1 Detailed Description

Minor class representing hints mechanism

The documentation for this class was generated from the following files:

- GameModes/Misc.h
- GameModes/Misc.cpp

2.9 `LinkedList< T >` Class Template Reference

Public Member Functions

- template<typename... V>
LinkedList (const V &...v)
- template<typename... V>
void **push_back** (T value, const V &...v)
- template<typename... V>
void **push_front** (T value, const V &...v)
- T & **getElement** (unsigned int i)
- void **pop_front** ()
- void **pop_back** ()
- [LinkedListNode](#)< T > * **getRoot** ()
- template<typename... V, typename F >
void **iterate** (const F &function, V &...v)
- template<typename... V, typename F >
void **reverseIterate** (const F &function, V &...v)
- uint32_t **count** ()

The documentation for this class was generated from the following file:

- LinkedList/LinkedList.h

2.10 `LinkedList< T >` Class Template Reference

Public Member Functions

- `LinkedList` (`T value`)
- `operator T&` ()
- `void setValue` (`T value`)
- `void insertBefore` (`LinkedList< T > *node`)
- `void insertBefore` (`T value`)
- `void insertAfter` (`LinkedList< T > *node`)
- `void insertAfter` (`T value`)
- `void popIn` ()
- `void popOut` ()
- `LinkedList< T > * erase` ()
- `bool insideChain` ()
- `bool selfReference` ()
- `LinkedList< T > * next` (`unsigned int distance`)
- `LinkedList< T > * prev` (`unsigned int distance`)
- `LinkedList< T > * next` ()
- `LinkedList< T > * prev` ()
- `template<typename F >`
`LinkedList< T > * select` (`const F &f`)
- `template<typename F , typename... V>`
`void iterateForward` (`const F &f, V &...v`)
- `template<typename F , typename... V>`
`void iterateBackward` (`const F &f, V &...v`)
- `uint32_t count` ()

Static Public Member Functions

- `static void advance` (`LinkedList< T > *&ptr, uint32_t dist`)
- `static void advance` (`LinkedList< T > *&ptr`)
- `static void recede` (`LinkedList< T > *&ptr, uint32_t dist`)
- `static void recede` (`LinkedList< T > *&ptr`)

Public Attributes

- `T _value`

The documentation for this class was generated from the following file:

- `LinkedList/LinkedList.h`

2.11 MistakeCounter Class Reference

```
#include <Misc.h>
```

Public Member Functions

- **MistakeCounter** (unsigned int tolerance)
- unsigned int **getMistakes** ()
- unsigned int **getTolerance** ()
- void **reset** ()
- void **increment** ()
- bool **gameOver** ()

2.11.1 Detailed Description

Minor class representing mistake counter

The documentation for this class was generated from the following files:

- GameModes/Misc.h
- GameModes/Misc.cpp

2.12 Move Class Reference

```
#include <Move.h>
```

Public Member Functions

- **Move** ([Coordinates](#) pos, uint8_t number)
- void **apply** (uint8_t **board)
- void **retract** (uint8_t **board) const

Public Attributes

- [Coordinates](#) **_pos**
- uint8_t **_number**

2.12.1 Detailed Description

Class representing single move by player, meant to be able to retrace itself

The documentation for this class was generated from the following files:

- Move/Move.h
- Move/Move.cpp

2.13 Sudoku Class Reference

```
#include <Sudoku.h>
```

Public Member Functions

- **Sudoku** (uint8_t rootSize, uint8_t **board)
- **Sudoku** (const [Sudoku](#) &sudoku)
- **Sudoku** ([Sudoku](#) &&sudoku)
- [Sudoku](#) & **operator=** (const [Sudoku](#) &sudoku)
- [Sudoku](#) & **operator=** ([Sudoku](#) &&sudoku)
- bool **isComplete** ()
- void **applyMove** ([Move](#) &move)
- bool **applyMoveConditionally** ([Move](#) &move)
- void **retractMove** (const [Move](#) &move)
- uint16_t **getSize** ()
- uint16_t **getRootSize** ()
- uint8_t * **operator[]** (uint16_t row)
- uint8_t & **operator[]** (const [Coordinates](#) &coords)

Friends

- std::ostream & **operator<<** (std::ostream &stream, const [Sudoku](#) &sudoku)

2.13.1 Detailed Description

Class responsible for holding, and manipulating sudoku board

2.13.2 Member Function Documentation

2.13.2.1 applyMove()

```
void Sudoku::applyMove (
    Move & move )
```

Applies move with no regard for correctness

2.13.2.2 applyMoveConditionally()

```
bool Sudoku::applyMoveConditionally (
    Move & move )
```

Applies move if valid

2.13.2.3 isComplete()

```
bool Sudoku::isComplete ( )
```

Check if sudoku is filled

2.13.2.4 retractMove()

```
void Sudoku::retractMove (
    const Move & move )
```

Undoes a move

The documentation for this class was generated from the following files:

- Sudoku/Sudoku.h
- Sudoku/Sudoku.cpp

2.14 SudokuGenerator Class Reference

```
#include <SudokuGenerator.h>
```

Public Member Functions

- **SudokuGenerator** (uint16_t rootSize)
- [Sudoku](#) generate ()

Friends

- uint32_t **count** ([LinkedNode](#)< SudokuGenerator::SudokuNode * > *node)

2.14.1 Detailed Description

Class responsible for sudoku generation

The documentation for this class was generated from the following files:

- SudokuGenerator/SudokuGenerator.h
- SudokuGenerator/SudokuGenerator.cpp

2.15 Test Class Reference

The documentation for this class was generated from the following file:

- test.h

2.16 Timer Class Reference

```
#include <Misc.h>
```

Public Member Functions

- void **start** ()
- unsigned int **asSeconds** ()

2.16.1 Detailed Description

Minor class representing timer

The documentation for this class was generated from the following files:

- GameModes/Misc.h
- GameModes/Misc.cpp

2.17 UserInterface Class Reference

```
#include <UserInterface.h>
```

Inheritance diagram for UserInterface:

Public Member Functions

- `template<typename T >`
UserInterface (`Game` &game, `LinkedList`< T > &eventQueue, `LinkedList`< std::string > &messageQueue)
- virtual void `initiate` ()=0
- virtual void `render` ()=0
- virtual void `display` ()=0
- virtual void `input` ()=0

Protected Attributes

- `LinkedList`< std::string > `_messageQueue`
- `Game` & `_game`

2.17.1 Detailed Description

Base interface to be used by all derived classes implementing `UserInterface`, graphical or in console

2.17.2 Member Function Documentation

2.17.2.1 display()

```
virtual void UserInterface::display ( ) [pure virtual]
```

Displays, or in case of CLI flushes, rendered elements. Meaningful mainly in GUI applications

Implemented in [BasicInterface](#).

2.17.2.2 initiate()

```
virtual void UserInterface::initiate ( ) [pure virtual]
```

invoked before rendering of UI

Implemented in [BasicInterface](#).

2.17.2.3 input()

```
virtual void UserInterface::input ( ) [pure virtual]
```

Gathers input from user and passes it to `_eventQueue` of appropriate type

Implemented in [BasicInterface](#).

2.17.2.4 render()

```
virtual void UserInterface::render ( ) [pure virtual]
```

Renders, or in case of CLI displays, UI elements. [Game](#) rendered is specified to have select few base components, such as: [SudokuBoard](#), [Timer](#) or [MistakeCounter](#) and others that will be drawn by UI instance

2.17.3 Member Data Documentation

2.17.3.1 `_game`

[Game](#)& `UserInterface::_game` [protected]

Reference to instance of class deriving from abstract class [Game](#)

2.17.3.2 `_messageQueue`

[LinkedList](#)<std::string> `UserInterface::_messageQueue` [protected]

Queue for passing messages between [Game](#) and [UserInterface](#) derived instances

The documentation for this class was generated from the following file:

- `UserInterfaces/UserInterface.h`

Skorowidz

- `_baseSudoku`
 - Game, [12](#)
 - `_filledSudoku`
 - Game, [13](#)
